

# Mobile Hospitals

## Instant Medical Facilities with Deployable Trailer Mounted Hospitals

**A quick solution to provide full medical facilities where existing hospitals have been damaged or destroyed.**

**Military users have an air transportable hospital that is quick and easy to deploy and offers a wide range of medical capability**

## Trailer Mounted Hospitals

This substantial trailer mounted system can quickly provide medium to long term (up to 15 years) medical capability in cities or towns, and also replace existing facilities where hospitals have been damaged or in some cases maybe destroyed.

The modular system is equipped to provide whatever level medical capability is needed; options include a CAT scan unit, operating theatres, ICU, examination trailer (pre and post op), pharmacy, out patients, wards, X Ray unit and other specialist capabilities, exactly the same as a normal built hospital.

Each of the trailers has double expanding wards that can be linked and made infinitely larger using corridors, therefore the hospital size is not a problem. Tent units can be added if required for additional bed space.

The trailer mounted mobile hospitals can be set up at almost any destination and are completely self sufficient and are ready to deliver quality medical care in a matter of hours after arrival at site.

The medical trailers can be towed by any standard heavy goods vehicle tractor unit to the required site and then removed to be used elsewhere.

## Mobile hospital solution, fully equipped and ready to operate ... anywhere.

**In the past deployable hospitals have usually been of the tented variety but our new mobile trailer mounted hospital offers many advantages over tented and container systems:**

- Greater medical capability from simple wound dressing to X rays and full operating theatres
- The system is self contained with on-board power generators and water storage facilities
- No civil works required to level the site. No cranes needed to unload containers
- The trailer mounted hospital is fully stocked with medical equipment, and arrives on site ready to use
- No specialist vehicle is required to tow the trailer mounted hospital, and no unloading equipment is needed at site
- Only 3 people are needed to deploy usually using the truck drivers (tents need many people)
- Unlike tents, there are no losses due to damage in storage from rodents and rotting
- No specialised storage required
- Life span is many years, unlike tents
